Meade

Meade

Company Background:

Founded in 1982 in Braystown, Co Meath, Meade Potato Company has grown into one of the country's leading growers, packers and distributors of fresh produce to the retail sector, employing over 500 staff directly or indirectly. Despite their size and level of activity, Meade's consistently earns top level "A" ratings when audited by Bord Bia, The British Retail Consortium and The Irish Organic Farmers and Growers Association; these are the main certifying bodies for Irish produce growers and pre-packers, and Meade Potato Company is certified with all of them.

Challenge

Standards are high in the agri-food sector, with audits to be passed at short notice not only by the main official certifying bodies but also, importantly, by retailers. For this reason Meade Potato Company required a convenient, accessible way to provide training to their employee base, minimising the administrative burden of training without sacrificing standards. They needed to streamline the scheduling, reporting and recording of all employee training. They also needed the ability to show, at the click of a button, all compliance records to auditors from any of these organisations, and to examine their training reports to ensure compliance with their own exacting health and safety standards.

Solution

Seams LMS provided the solution. For resource management purposes, Meade moved their training system online, minimising the required investment of time and money while focusing the training on the individual employee. This ensured that the high training standards so crucial to their organisation were maintained. Employee engagement was greater facilitated by allowing staff to complete their training at any time they chose, from whatever device was most convenient to them. This also allowed for a streamlining and simplifying of training administration. The simple training portal meant access to the Seams LMS system was available 24/7 and administration was streamlined since the system automates reporting on all staff training, allowing the completed training data to be called up at the click of a button at any time.
